

## Overview

---

With a solar power system and high-efficiency heat pumps, your building can reduce its consumption of expensive electricity and gas from utility companies. As the price of these services keep rising, the savings achieved by solar panels and heat pumps also increase.

While calculating costs, several internal cost factors have to be considered. Note the use of "costs," which is not the actual selling price, since this can be affected by a variety of factors such as subsidies and taxes:

- o Capital costs tend to be low for gas and oil power stations;
- o moderate for onshore wind turbines and solar PV (photovoltaics);
- o higher for coal plants and higher still for waste-to-energy, wave and tidal, solar thermal,
