How to write ceil and floor in latex?

Is there a macro in latex to write $\text{ceil}(x)$ and $\text{floor}(x)$ in short form? The long form $\left\lceil x \right\rceil$ $\left\lfloor x \right\rfloor$ is a bit lengthy to type every time it is used.

Ceiling and floor functions

What are some real life application of ceiling and floor functions? Googling this shows some trivial applications.

[How to Graph Floor/Ceiling Functions in LaTeX \(PGFPlots\)](#)

The PGFmath package includes a ceil and a floor function. The pgfplots offers a few options for Constant Plots (see manual v1.8, subsection 4.4.3, pp. 57ff.). The option jump mark left

Solar Photovoltaic

In this category dwg there are files useful for designing a photovoltaic system, solar systems, solar panels to produce electricity.

macros

Use `\xintFloor` command from the `xintfrac` package. It is completely expandable, hence can even go in an `\edef` or other contexts needing expandability. It natively accepts fractions such as $1000/333$ as

'Floor' and 'ceiling' functions

Is there a convenient way to typeset the floor or ceiling of a number, without needing to separately code the left and right parts? For example, is there some way to do $\lceil x \rceil$ instead of

Solar Diagram Tool

Formula for the floor function

The most natural way to specify the usual principal branch of the arctangent function basically uses the idea of the floor function anyway, so your formula "for" the floor function is correct

[Floor-mounted solar power generation routine diagram](#)

The diagram of a solar power system provides a visual representation of how solar energy is captured, converted, and used to generate electricity. By understanding this diagram, one can

[How to represent the floor function using mathematical notation?](#)

4 I suspect that this question can be better articulated as: how can we compute the floor of a given number using real number field operations, rather than by exploiting the printed notation, which
