

# Storage capacity of wind solar and storage

## Overview

---

The Energy Information Administration projects that 32.7 GW of wind generation will be deployed this year, accounting for nearly 93% of total new capacity, which is expected to reach a record 63 GW.

[Wind and solar need storage diversity, not just capacity](#)

Designing a robust energy storage strategy requires more than simply expanding capacity-it demands rethinking the role, architecture, and integration of storage within the power

[EIA: New solar, wind + storage capacity will swamp fossil fuels in 2026](#)

In 2025, solar, wind, and storage added over 55 GW of new capacity, and projections for 2026 are even more dramatic, according to the EIA.

[Wind and solar need storage diversity, not just capacity](#)

In practice, energy storage is often oversimplified as a tool for "capacity compensation"-the idea that merely increasing the scale of storage can bridge the intermittency of wind and solar generation.

[Solar, battery storage to lead new U.S. generating capacity additions](#)

This growth highlights the importance of battery storage when used with renewable energy, helping to balance supply and demand and improve grid stability. Energy storage systems
