

What is the DC difference of solar inverter

Overview

A solar inverter is really a converter, though the rules of physics say otherwise.) Most homes use AC rather than DC energy.

A solar micro-inverter, or simply microinverter, is a plug-and-play device used in photovoltaics that converts direct current (DC) generated by a single solar module to alternating current (AC). Microinverters contrast with conventional string and central solar inverters, in which a single

inverter is connected to multiple solar panels. The output from several microinverters can be combined and often fed to the electrical grid.
