[How can I get the size of a MySQL database?](#)

The file size does not reflect the real database size. In fact, after deleting entries from a table, the file is not shrunk; instead, it contains unallocated space that the engine will reuse by the next occasion.

[What does the C++ standard say about the size of int, long?](#)

If the size of the int is that important one can use `int16_t`, `int32_t` and `int64_t` (need the `iostream` include for that if I remember correctly). What's nice about this that `int64_t` should not have issues on a 32bit
