

Which is more tiring making aluminum molds or pressing photovoltaic panels

Overview

Other disadvantages of steel molds are they take longer to get up to temperature, and because of their weight-especially with multiple cavities-are more tiring to use. Aluminum molds are less durable, but with care will probably last longer than you will.

The main disadvantage of permanent mold casting is that the molds have high initial cost. While called permanent, molds can wear or fail over time due to thermal stress.

Iron, Brass or Aluminum Molds

I usually run a mold temperature of 375 to 400 depending on whether it's bottom poured or if it's ladle poured. I don't care what the temperature is, I just lock into a steady cadence and spot
